EU-GRADE AI EVIDENCE AND GOVERNANCE

PalmerAI

PalmerAI is an AI Data Security, Governance and Audit Evidence Layer for controlled, document-heavy, approval-aware AI workflows.

Buyer one-pager
Executive overview
Security and compliance brief

Visibility into sensitive AI workflows | Approval-aware policy handling | Exportable evidence packs

WHY THIS MATTERS

AI is already being used in teams. The harder problem starts when customer files, contracts, CVs, invoices, or internal documents move through AI workflows and nobody can show what happened later.

Shadow usage: AI use grows faster than review and evidence processes.

Document exposure: risk changes once business documents enter the workflow.

Audit gap: later questions become hard to answer cleanly without a decision trail.

BEST FIT

Buyer: CISO, compliance, governance, procurement, or security-conscious operations lead.

Workflow: document-heavy, approval-sensitive, or customer-data exposure in AI usage.

Need: clearer reviewability than raw logs and informal process can provide.

First step: usually a posture review, then one evidence pilot, then managed expansion only if justified.

WHAT CHANGES IN PRACTICE

Before model-side action
Requests and documents can be checked before they continue.

When risk rises
Approvals can become explicit instead of informal workarounds.

When questions come later
Decision evidence stays reviewable instead of reconstructed from raw logs.

Across teams and accounts
Oversight can stay structured even when delivery spans different users or partner-led engagements.

HOW TEAMS USUALLY START

Posture Review: map the workflow, document boundary, approval pressure, and evidence requirement.

Pilot: prove one real workflow with a clear control objective.

Managed Governance: expand only after the operating rhythm already works.

COMMERCIAL OUTLINE

AI Governance Posture Review: EUR 4,900 fixed

Evidence Pilot: from EUR 12,500

Managed Governance: from EUR 2,900 / month annual

Custom Enterprise: from EUR 25,000 setup when standard scope is not enough.

CURRENT BOUNDED SUPPORT

- Controlled intake and document-aware handling
- Readable business documents in a bounded governance path
- Deterministic OCR for governed images and bounded document cases
- Approval-aware states and evidence metadata

NOT CLAIMED BY DEFAULT

- Universal OCR across arbitrary inputs
- All phone photos, handwriting, or every image quality case
- Unlimited AI/model usage or token cost inclusion
- A full enterprise DLP replacement, legal certification, or source-code access

START WITH ONE WORKFLOW YOU ACTUALLY NEED TO CONTROL

Use a posture review first when the workflow, document boundary, or approval pressure is still unclear.

Use an Evidence Pilot next when one workflow is already known and you need proof that the control model holds in practice.

Expand later only after the evidence, operating rhythm, and support expectations are already clear.

PRIMARY NEXT STEP

Book a Posture Review when the main concern is still being scoped.

See full pricing if one workflow is already known and you need the commercial path.

Open Evidence Pack Sample to see what reviewable output looks like later.
