Prompts + documents

Approvals when risk rises

Evidence for later review

Tenant-aware control

PalmerAI gives teams one governed path for AI prompts and document uploads, so approvals, decisions, and evidence remain reviewable later. It is built for organizations that want operational control around real AI usage without turning the whole program into a vague platform exercise.

### WHAT IT IS

Multi-tenant Operational AI Governance Layer for prompts, documents, approvals, evidence, and tenant/account boundaries.

### WHAT IT IS NOT

Not a generic routing proxy, not a full enterprise DLP replacement, and not an open-ended transformation platform.

### HOW IT WORKS

1

#### Request received

One named operational intake path.

2

#### Document checked

Inspectability and policy fit stay visible.

3

#### Approval if needed

Risk triggers structured human review.

4

#### Decision recorded

Policy reference and reason stay attached.

5

#### Evidence ready

Reviewable later for buyers and operators.

### WHY TEAMS BUY IT

- Reduce uncontrolled AI use in real workflows.
- Reduce document-driven risk that bypasses prompt-only controls.
- Reduce weak after-the-fact evidence and unclear approval ownership.
- Reduce governance drift across teams or tenants.

### CORE OUTCOMES

- One governed path for prompts and documents.
- Approvals where they matter.
- Evidence that can be reviewed later.
- Cleaner path from pilot to managed governance.

### BEST FIT

- Sensitive or document-heavy workflows.
- Approval paths around part of live AI usage.
- Need for clearer evidence than raw logs provide.
- Tenant or account separation requirements.

### COMMERCIAL ENTRY AND BOUNDARY

**How teams usually start:** Posture Review → Pilot → Managed Governance

**Pricing teaser:** Entry offers from EUR 2,500. Managed governance from EUR 1,800 / month.

**Document control boundary:** Controlled intake, approval-aware handling, evidence metadata, and raw attachment bypass blocking are included. OCR, antivirus, and full enterprise DLP replacement are not included by default.

### Start with one governed workflow.

Book a Posture Review to define scope, approval path, document boundary, and evidence requirements before broader rollout.
